Launch and Recovery System (LARS)

General Specifications

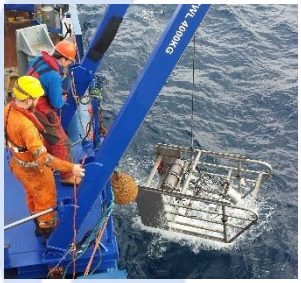

- Low cost solution
- Easily road transportable
- Easily mounted to suitable vessel

Services

The Benthic Solutions launch and recovery system (LARS) is the perfect solution for environmental and geochemical survey operations using existing vessels of opportunity, irrelevant of existing lifting and handling equipment onboard.

The package provides a low-cost mobilisation and operational capability where dedicated survey vessels are not available or are cost prohibitive. Typical surveys include utilising local supply and support vessels.

Survey packages can include containerised A-frame and winch, fast deep-water winches, hydraulic power units (HPU), cables, sampling and camera systems and containerised offshore laboratory as required. Systems are designed for operation on a 12 or 24 hours basis with a small team of specialist personnel.

Specifics

Item	Value
Shipping Weight (Tare)	~ 1775KG
Shipping Dimensions (L,W,H)	3554 x 2200 x 2850mm (4250mm max)
Max Meight	4300mm
Centre Lifting Point SWL	3000kg
Side Lifting Points SWL	2000KG
Hydraulic Hose Length	30m
Flow Set required	115LPM
Pressure Required	225Bar
Hydraulic Fittings 1	ISO A Quick release, 1" BSP FEMALE C/STEEL
Hydraulic Fittings 2	ISO A Quick release, 1" BSP FEMALE C/STEEL
