BSL ROV Tooling – Dredge

General Specifications

- Stainless steel box, for reduced contamination
- Light weight construction
- ROV Deployed
- Ideal for decommissioning and cuttings pile surveys

Services

The Benthic Solutions Limited's ROV dredge allows for collection from fine through to coarse sediments, ideal for areas with underlaying bedrock preventing full penetration of standard grab samplers.

Can be deployed on its own in the ROV manipulator, or in a basket containing twoallowing for two samples in a single dive.
